Please amend the Abstract of the Disclosure as follows.

ABSTRACT

~~The invention relates to~~ A system and method for traffic management in a radio system. ~~The method includes monitoring at~~ At least one cell load parameter of non-real-time users in a radio cell is monitored. A cell reselection process is triggered in the radio cell on the basis of a cell load parameter exceeding a pre-set cell load threshold, based on at least one cell load parameter. The non-real-time users perform cell reselection and triggering the selected non-real-time users to perform cell reselection.
